Planwell's Roofcoat Xtra

IT'S SO SIMPLE !

Application

Roofcoat Xtra is best applied by brush, roller or squeegee and can be laid in one or two coats depending on requirements. No specialist training is required. The system will adhere to most **aged** surfaces including felt, asphalt, glass fibre, wood, lead, metal, PVC, slate, brickwork, cement and tiles. Some asbestos and fibre cement roofs may require a primer before application. Other surfaces may require some preparation work (see application instruction leaflet for further details). Application instructions are available with all orders placed.

Not for use on Walkways or Balconies, new asphalt or new bitumen surfaces or timber substrates, new uPVC, GRP, Copper, Brass or Lead.

Coverage Rates

For full surface protection apply 1 or 2 overall coats by brush, roller or squeegee. Recommended minimum coverage 1Kg per m2. *Seals up to 10 years is based on 2 coats.

Cure Time

Curing takes 6-7 days depending on ambient temperature and ventilation. Once cured the system will remain tack free and in a flexible condition.

Colours

Roofcoat Xtra is available in 20kg and 5kg tins in Standard Grey & Black colours. Also available in other colours - please contact Planwell for further details.

Water Repellency

Rainfall immediately after application has no adverse effect on this product.

Shelf Life

Up to 2 years if stored correctly in an unopened container.

Roofcoat Xtra STANDARD COAT with fibres, brush applied

DESCRIPTION

A high quality solvent based coating that gives a roof long-term waterproofing protection with added fibres that interlace to cover up small gaps or cracks.

USES

Ready for use on flat roofs, pitched roofs, weathered asphalt and bituminous surfaces, gutters, concrete, brickwork, fibreglass, felt, slate, metal (Galvanised and Ferrous), aged uPVC.

- Brush applied.

Not for use on Walkways or Balconies, new asphalt or new bitumen surfaces or timber surfaces, new uPVC, GRP, Copper, Brass or Lead.

Standard Coat: for an all over covering on a roof.

COLOUR RANGE

- Grey and Black. Other colours to order.

PACK SIZE

- 5kg and 20kg containers.

SPREADING RATE

- *Standard Coat:* approximately 1 kg per metre² dependent on substrate.
- *Aggregated Coat:* Available on request in above colours.
- *Smooth Coat:* Available on High Build and Standard Coat (without fibres).

DRYING TIME AND APPLICATION

- Application temperature should be between 5°C and 25°C.
- Drying time - up to 6-7 days depending on temperature and thickness of coating.
- The product may remain slightly soft for a further period depending on climatic conditions, this is not detrimental to the waterproofing qualities of the product.
- Some very porous surfaces may require a primer before application, ie. on asbestos type roofs.

WATER REPELLENCY

- Rainfall immediately after application has no adverse effect.

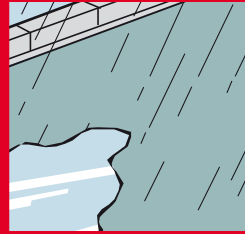

SHELF LIFE

- Up to 2 years if stored correctly in an unopened container.

Roofcoat Xtra SMOOTH

for spray, brush or roller application

DESCRIPTION

A high quality solvent based roof coating that gives long-term waterproofing protection. This Smooth Coat is recommended for application and easy flow on very large roofs.

USES

Ready for use on flat roofs, pitched roofs, weathered asphalt and bituminous surfaces, gutters, concrete, brickwork, fibreglass, felt, slate, metal (Galvanised and Ferrous), aged uPVC.

- Can be brush, roller or spray applied.

Not for use on Walkways or Balconies, new asphalt or new bitumen surfaces or timber surfaces, new uPVC, GRP, Copper, Brass or Lead.

High Build Coat: for patch repair/all over roof coating.

Standard Coat: for an all over covering on a roof.

COLOUR RANGE

- Grey, Black, Solar Reflective White and Translucent. Other colours to order.

PACK SIZE

- 5kg and 20kg containers.

SPREADING RATE

- *High Build Coat:* approximately 1 kg per metre² dependent on substrate.
- *Standard Coat:* approximately 1 kg per metre² dependent on substrate.
- *Spray recommendation:* Can be airless sprayed at an atomising pressure of 2000psi with a tip size of 19 thou using a 3/8 inch hose up to 30 metres maximum length (consult manufacturer for further details).

DRYING TIME AND APPLICATION

- Application temperature should be between 5°C and 25°C.
- Drying time - up to 6-7 days depending on temperature and thickness of coating.
- The product may remain slightly soft for a further period depending on climatic conditions, this is not detrimental to the waterproofing qualities of the product.
- Some very porous surfaces may require a primer before application, ie. on asbestos type roofs.

WATER REPELLENCY

- Rainfall immediately after application has no adverse effect.

SHELF LIFE

- Up to 2 years if stored correctly in an unopened container.
